

## **Planting & Growing** Growing leeks - collage resources

### **Leeks need lots of sunshine to grow.**

The sunshine gives them energy and helps them to grow big and strong.

When we grow leeks and eat them we get energy too.

We have shown our suns like this ....

### **Leeks need plenty of water to drink to help them grow.**

The water comes from the rain that fall from the clouds.

We have used .... to make our clouds and .... to make our rain.

If we grow seeds inside we need to water them.

### **Leeks need to grow in the soil.**

They grow roots to reach the food they need from the soil, like vitamins.

Our bodies need lots of different vitamins.

Leeks are very good for us when we eat them.

We have used .... to make our soil.

### **The farmers plant the leeks as tiny seeds.**

They look after the seeds as they start to grow.

When they are ready to eat, the farmers harvest the leeks and we can buy them to eat.
